### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under Ex Parte Quayle, 1935 Comm'r Dec. 11 (1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on January 31, 2005 has been entered.

All claims are drawn to the same invention claimed in the application prior to the entry of the submission under 37 CFR 1.114 and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the application prior to entry under 37 CFR 1.114. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action after the filing of a request for continued examination and the submission under 37 CFR 1.114. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2623

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

***Claim Rejections - 35 U.S.C. § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 3, 9, 15, 18-19, 21-22, 46-49, 59-61, 65-66, 85-90 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6256349 to Suzuki et al. ("Suzuki" a reference of record ).

As to claim 1, Suzuki discloses a method for digitally processing integer transform data representing a phenomenon, the method comprising:

performing an inverse transform of said integer transform data (after quantized in encoding side, the data is integer data transformed) to the real domain forming high-precision numbers (Fig. 2 element 84, col. 3 line 1-col. 4 line 14 and col. 12 lines 36-61, col. 29 lines 36-37); and

directly manipulating said high-precision numbers to produce an effect (Fig. 2, col. 12, lines 33-col. 13, line 64, note that the effect can be prediction image etc.).

As to claim 3, Suzuki further discloses the phenomenon is an image (Fig. 2).

As to claims 9 and 22, Suzuki further discloses IDCT(col. 12, lines 55-62).

Art Unit: 2623

As to claim 15, Suzuki further discloses inverse quantization (Fig. 2 element 83).

As to claims 18-19, Suzuki further discloses the coded data are image and video data (abstract).

As to claim 21, Suzuki further discloses MPEG (col. 1, line 48-50).

As to claims 46-49, 59-61, 65-66 the claims 46-47, 59-61 and 65-66 are the corresponding system, article of manufacture, and program storage device claims to claims 1, 3, and 15. The discussion are addressed with regard to claims 1, 3, and 15.

As to 85-90, the elements are addressed with regard to claims 1 and 15.

***Claim Rejections - 35 U.S.C. § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 4-8, 10-11, 16-17, 20, 23-24, 55-58 and 84 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki in view of US 6178205 to Cheung et al. ("Cheung" a reference of record).

As to claims 2 and 16, Suzuki does not explicitly mention manipulating, clipping the integers to an allowed range forming converted image.

Cheung, in an analogous environment, discloses converting said high-precision numbers to integers and clipping the integers to an allowed range forming converted image (col. 10, lines 30-46, note that converting and clipping is one kind of manipulating).

Art Unit: 2623

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the scheme of Cheung in the method of Suzuki in order to improve the output quality of the images (Cheung, col. 1, line 50-col.2, line 21). Doing so would remove the blocking effect and errors in the output image so that the quality of the method is improved.

As to claim 8, Cheung further discloses fraction parts (col. 7, table 2).

As to claims 4-7, 10-11, 17, 20, 23-24, 55-58, Cheung does not explicitly mention the features of chroma-key merging, color correction, image rotation (90 degree), floating number, IDWT, IDFT, entropy decoding, JPEG, raster display monitor, spectral analysis and audio signal.

However, the examiner takes Official Notice that these features are notoriously well known in the art.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include these features in the method of Cheung in order to improve the quality of the images.
